Summary

The purpose of this brief report is to provide ConxusNEO with in-depth insights into the labor market demand for healthcare workers in the Akron MSA. The most recent data was used: Online job postings within the Akron MSA during the last 365 days dating back to July 2016.

A direct investigation of jobs employers post online provides a more complete picture of jobs in demand as they emerge and change. The source is Burning Glass which identifies employers with high demand for workers and occupations with the most openings, revealing details about employers' demand for skills and credentials.¹

Most employees working in the combined Summit and Portage area, defined as the Akron Metropolitan Statistical Area (MSA), also live in the MSA. It is also true that employed residents of the MSA mostly work within the MSA. For that reason, the focus of this report is on the Akron MSA.

Highlights of this report include:

Basic industry facts

- Summit County is where 92% of all healthcare organizations are located.
- Healthcare organizations are grouped into three industry segments: Hospitals; Medical Offices and Centers for out-patient care; and Long-term Residential Care facilities. These are very different in terms of their workforce needs for healthcare workers.
- In 2016 over 42,000 workers were employed in the MSA in the healthcare sector. This does not include healthcare workers employed by other industries although the number is relatively small. Modest job growth is expected of 10% by 2022.
- The Akron MSA does attract patients from other areas in special cases due to specialized services such as trauma care and mental health services.

Basic facts about occupations of healthcare workers now employed and job ads

- Only 13,540 workers (or 32%) have a Bachelors or more; These are Healthcare Professionals and Technical occupations plus a few managerial ones.
- Most work in occupations where less than half have a Bachelors or more.
 - ✓ Aside from LPNs, EMTs, Respiratory Therapists, and Medical Records Information Technicians, most of this group of jobs are Healthcare Support or Office Support.

¹ Burning Glass has compiled a database of over 150 million job listings, updated daily from roughly 40,000 websites nation-wide. The database includes listings from major job boards, newspapers, government agencies, and a broad array of small, medium, and large employers—so long as they are placed online. The sites captured include a strong representation of the small businesses driving economic recovery; 51 percent of sites mined produce 20 or fewer jobs. Most sites are employer sites. Also, Burning Glass leverages patented text mining to code 70-plus data elements to render detailed skills-level intelligence on who is hiring and where, what jobs are in demand, and what skills and credentials employers now require for those jobs.

- ✓ For nurses, 42% have an Associate degree.
- ✓ For Occupational and Physical Therapists and Physician Assistants, however, most workers have a Bachelors.
- Over 7,200 healthcare jobs were posted in the last 365 days, one posting for every 5.5 workers employed in 2016. These were for a wide-ranging array of occupations.
- Nursing and related occupations provided over half of the jobs for healthcare workers and dominate recent job postings too.
- Specific occupations with heavy emphasis in job posting activity are: Nurse Practitioners; RNs; and Occupational Therapists and had a posting for every 2 workers employed in 2016. Several others had ratios of number of current workers to recent job postings between two and three to one: Medical and Health Services Managers; Physical Therapists; and Medical and Clinical Laboratory workers.
- Summa Health Systems; Akron Children's Hospital; Western Reserve; and HCR Manorcare are the employers with the most ads for healthcare workers most recently. Cleveland Clinic and University Hospitals rank fifth and sixth in job postings. Demand from these employers when combined significantly set the tone in the Akron labor market.

The healthcare sector is a major source of middle-skill jobs in today's labor market

- The healthcare sector provides wide-ranging employment opportunities for young and transitioning workers seeking career employment and living wages. There are far more ads for positions requiring a college Certificate or Associate degree than those requiring a Bachelors.
- Most of this is due to the RN ads in which only 29% are recruiting for a Bachelors in nursing.
- Hospital differ from the other healthcare industry segments in the stated preference for Bachelors' degrees: For nurses, 59% of their ads seek a Bachelors in nursing.
- There were 597 ads among the over 7,000 for healthcare workers that simply seek appropriate healthcare technical training beyond a high school credential (and passing requisite certification) for specific occupations. Most are healthcare support or Office support occupations within healthcare organizations. Nursing Assistants and Patient Service Reps tops this list. These can be pre-entry jobs as a possible on-ramp to any of the middle-skill healthcare jobs in demand.

Healthcare informatics

 Recently evidence in job ads of employer demand for health informatics dropped significantly. Demand peaked in 2015 and now is seen in only one in eleven job ads for healthcare workers.

Healthcare Labor Market Update

Generally speaking, working residents of Summit County can feasibly commute to most jobs in the combined economic region of Cleveland, Akron and Canton MSAs plus Wayne County. Wayne County is added to the overall region because of the significant numbers of workers who commute into the larger region, as well as residents of the larger region that commute to work at several major employers in Wayne County.

Many workplaces located in any of these surrounding counties can be a feasible commute to work and back by personal automobile. It is not surprising then to know that 27% of workers living in Summit County go to work in another county, despite the large and diverse job base of Summit.

Workers residing in any of the ten counties routinely commute to work in a county other than the one where they live. Likewise, employers routinely recruit for new hires outside of the county where they are located. The Cleveland, Akron and Canton areas are overlapping,

interdependent labor markets. They form a region in which almost all residents live and work in the 10-county region.

While interdependent, average wages do vary across these three MSAs based on specific demand and supply conditions. To some extent, then, they operate independently of each other.

Fact is: Most employees working at workplace in the combined Summit and Portage area, defined as the Akron Metropolitan Statistical Area (MSA), also live in the MSA. It is also true that employed residents of the MSA mostly work within the MSA. For that reason, the focus of this report is on the Akron MSA. Healthcare industry sector and healthcare workers employed are shown for the Akron MSA, rather than the broader region.

I. Role of Healthcare in Akron MSA

The healthcare industry is comprised of three main sources of healthcare service industries: Hospitals; Offices of doctors and clinics where medical treatment is offered to patients on an outpatient basis; and Long-term Residential Care facilities. Job growth across and within these industries has not been the same. Some segments are creating more jobs; others are growing jobs at a faster pace. Some segments bring significant income into the region's economy by

providing patient care to customers not residing in NEO. Employers demand for and available supply of workers differ among these three industry segments.

Whether people travel from elsewhere in Ohio, other states, or around the globe, the Cleveland Clinic and to a lesser extent University Hospitals help the region grow just as manufacturers do. In Akron, certainly Children's Hospital serves special needs of children and young people far beyond Summit County. Hospitals and certain specialized medical services in Summit serve a broader region mostly south of Akron.

Ninety-two of every one hundred jobs in the Healthcare industry are in Summit County. Portage county residents needing healthcare services rely heavily on Summit providers. As a share of all

| Akron MSA: County of Location of Jobs in Healthcare Industry 2016 | | | | | | | |
|---|-----------|---------------------|-----------------------------|------------------------------|--|--|--|
| County Name | 2016 Jobs | Percent of Total | Avg. Earnings Per Job | 2016 Location Quotient | | | |
| Summit County | 39,310 | 92.0% | \$60,997 | 1.38 | | | |
| Portage County | 3,429 | 8.0% | \$45,860 | 0.54 | | | |
| MSA EMSI Analyst | 42,738 | 100.0% | \$59,782 | | | | |

jobs in Portage, the healthcare system is only half the size expected given its population base. If Portage were more remotely located, likely it would have a larger base of providers, especially hospitals and specialists working out of offices or out-patient centers.²

Industry trends since the recession

The recovery of the healthcare industry, based on total job ads active during each year, started to bounce back in 2011 and has increased modestly each year. Based on total ads posted during the first half of 2017, the MSA is on pace for yet another year of positive gain in jobs posted for healthcare professional and technical workers plus healthcare support workers.

Jobs in Healthcare Industries

Hospitals; Offices of Physicians and Others; and Long-term Residential Care, in that order, generate the most jobs in the Akron's healthcare industry sector. This is all jobs, not just workers

E

² This is evident when using the Location Quotient (LQ). The LQ is calculated by taking a specific industry's total jobs expressed as a percent of all jobs in the <u>region</u>, and divide that percentage by that specific industry's total jobs expressed as percent of all jobs for the <u>nation</u>. This ratio provides an index of the importance of an industry within a region when compared to its importance in the nation.

directly involved in the delivery of patient care. It includes receptionists, secretaries, IT professionals, maintenance workers, etc.

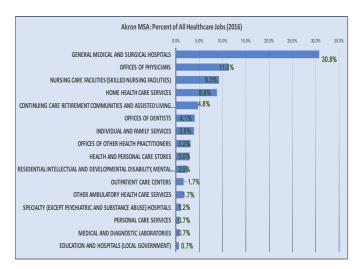

Typically, healthcare services develop within a local area to meet the needs of residents. In some cases, though, especially for advanced health services and specialized care, patients are drawn from surrounding areas.

Based on greater than average number of jobs in healthcare within the MSA:

- It appears that mental health services are serving a larger region than the MSA.
- Hospitals in Summit County are attracting patients that live outside the MSA.

These conclusions are based on the calculation of a Location

Quotient.³ In both cases, the location quotient is larger than 1.25. In the table, General Medical and Surgical Hospitals have a quotient of 1.51. This means that for NE Ohio, jobs in this industry are 51% larger than the nation. This is highly unusual except for regions with nationally and internationally known hospitals that attract patients into their regions. For out-patient mental health clinics, the quotient is 1.77. For offices of mental health practitioners, it is 1.37. The increased level of these services strongly suggests that patients are being attracted into the area from smaller counties to the south that lack these services.

Hospitals accounted for 37% of all jobs and 31% of healthcare workers employed in the Akron MSA healthcare sector.

There are five and a half jobs in 2016 for every job posting (5.5:1) during the last 365 days. This is relatively high level of postings when compared to other occupational groups or industry sectors. The healthcare sector has:

- An expected rate of increase in total jobs of only 10% over the next six-years (2022)
- Only an average churn rate for healthcare workers in general (workers changing employers during a year's time);
- No major concerns of current workers retiring out of the workforce in the next few years.

It is very unlikely that this number of postings is a reliable indicator of actual hires employers make.

The healthcare industry has a reputation for continuous postings online across the spectrum of healthcare jobs, especially for nursing-related positions. The labor market for healthcare workers in general is competitive and the search to add or replace workers is very active, especially for selected professional and technical workers.

³ The location quotient (LQ) is determined by taking a specific industry's total jobs expressed as a percent of all jobs in the area, and then divide that figure by that industry's total jobs expressed as a percent of all jobs at the nationally level. This ratio provides an index of the relative importance of an industry within an area compared to its importance in the national economy.

Healthcare occupations with most ads relative to workers already employed

The occupations most intensely posted are highlighted in the following table. *Nurse Practitioners; RNs;* and *Occupational Therapists* had a posting for every 2 workers employed in 2016. Several others had ratios of number of current workers to recent job postings between two and three to one: *Medical and Health Services Managers; Physical Therapists;* and *Medical and Clinical Laboratory* workers. *Home Health Aides* and *Customer Service Reps* had the least number of ads in ratio to the employed workforce.

This ratio is used as an indication of the intensity that employers are seeking to hire in these occupations.

II. Demand for healthcare workers last 365 days

Jobs in real-time demand by the Healthcare Industry

Total postings in the last 365 days (dating back to July 2016) for the Akron MSA for occupations directly or indirectly related to delivery of health services were 7,295.

By far the largest number of job postings has been for nursing and related occupations (59% of all job ads), as shown in the table. Numerous openings existed for jobs ranging from healthcare support staff (10%); physicians and assistants (10%); to Therapists and Medical Technologists/ Technicians (6% and 5%, respectively).

These ads span dozens of specific employers' workforce needs and career options for the area's young and transitioning adults considering a career in healthcare.

Employers with the most postings

Summa Health Systems had the most online ads for workers (395) during the last 365 days, dating back to last July. This is followed by Akron Children's and Western Reserve with 264 and 202, respectively. Akron locations for Cleveland Clinic and University Hospitals postings rank sixth and seventh in terms of job postings.

These top employers have sufficient need to hire new workers that, together, they represent buyer power in the Akron area labor market for healthcare workers. Much like the Clinic and UH in the Cleveland market, together these employers influence market conditions relative to skills and abilities and education requirements. None of them alone has such influence, but when combining their demand, they benchmark labor market conditions in some cases.

Mean salary for healthcare occupations with most postings

Salary information is seldom included in job ads. This explains why so few occupations had sufficient data to provide reliable estimates of mean starting salaries. The BLS estimates are

based on several databases but can overstate estimates of what new hires can expect to earn. They are mean figures for all current workers no matter how long they have worked in the position. However, where data from both sources exist, they do not differ greatly. These figures can be better evaluated by employers actively hiring.

Working on a full-time basis, most job openings in *Healthcare Support* may not enable workers to earn a living wage. Mean salaries below mid-thirties likely equates to less than \$17 hourly.

Education of healthcare workers employed in Akron MSA

Occupations in the top half of the table are filled with workers that predominately *have a Bachelors*. All occupations are held by workers where 50% or more of them have the degree. Most of these jobs are filled with workers that have a Bachelors, more than 90% for most of

these occupations.

However, only fifty-seven percent of RNs employed in 2016 are estimated to have a Bachelors.

Middle-skill and below occupations (shown in the bottom half of the table) are held by workers *less than a Bachelors*. The majority of these workers has only some college or an Associate degree.

Aside from LPNs, EMTs, Respiratory Therapists, and Medical Records Information Technicians, most of this group of jobs are Healthcare Support or Office Support. These

workers often have no more a high school credential and any needed certification for the job.

Many of these workers, no matter the occupation, have been employed for years and were hired when very different demands were placed on these positions.

What level of education do employers now require when hiring for these jobs?

Coming out of the recession, nationally there is evidence that employers in general have engaged in a practice of 'up-credentialing' when hiring. They are said to be doing this to take advantage of a loose labor market where the employer can 'pick and choose'. Regardless, what preferences are employers currently stipulating in recent job ads? For example, are employers showing a clear preference for a Bachelors in nursing?

LEVEL OF EDUCATION BY OCCUPATION ADVERTISED BY EMPLOYERS AS MINIMALLY ACCEPTED

The healthcare sector provides wide-ranging employment opportunities: 2,700 ads stipulate that an Associate or less of postsecondary education is minimally acceptable. Only 1,767 ads stipulate Bachelors as required or preferred.

The primary reason for this tilt toward less than a Bachelors is traced to ads for RNs. More than twice as many ads for Associates than Bachelors as the minimum credential needed when applying: 2,390 ads in comparison to 1,189 requiring a Bachelors. This is evident from the

number of occupations that only had ads for one level of education.

SUPPORTIVE OCCUPATIONS REQUIRING ONLY TECHNICAL TRAINING AND HIGH SCHOOL CREDENTIAL

There were 597 ads among the over 7,000 for healthcare workers that simply seek appropriate healthcare technical training beyond a high school credential (and passing requisite certification) for specific occupations. Most are healthcare support or Office support occupations within healthcare organizations.

While many of these jobs may not offer full-time employment, or pay a living wage, they can be considered pre-entry jobs that provide an on-ramp to a career in healthcare as they acquire industry knowledge and skills through job experience and additional education.

HEALTHCARE CERTIFICATIONS APPEARING IN ADS FOR HEALTHCARE WORKERS

Certifications included in ads for all healthcare occupations are numerous. Most are specific to occupations and job responsibilities dealing with patient care. These appear in the most ads which are distinguished by level of education minimally required. Rarely was an ad without at least one certification mentioned.

Of course, RN licensure is first and is required by law. The others are either not unique to the occupation, or are specifically

related to the occupation; Nurse Practitioner, for example.

Hospitals differ from rest of healthcare sector

Hospitals, though, appear to differ from the rest of the healthcare sector in terms of a preference for Bachelors. For RNs, 59% of hospital ads require or prefer a Bachelors in nursing degree. This is nearly exactly the percentage of currently employed RNs with that degree.

The caveat on these data is that information in the ads often do not allow Burning Glass to assign ads to hospitals. It is not possible to determine how many more ads were from Hospitals. However, given that the largest hospitals appear as the top employers with job ads, these data appear to have minimal bias.

Assistant tops the list of postings. Beginning about ten years ago, major changes were launched in the computerization of patient and related information and creation of networked systems for sharing information among providers, insurers, etc. This new field of health informatics became a major topic in workforce development: how would the healthcare industry respond to this new challenge and what impact would it have on occupations and skills employers seek in the labor market?

In a report released in 2012 by Burning Glass, dramatic increases were noted in the demand for informatics skill sets from 2007 to 2011. The report concluded:

"Health informatics is one of those emerging opportunities, both for individuals hoping to improve their career prospects and for educational institutions seeking to offer them the training and credentials they need to succeed. The career-ladder aspect of health informatics lends itself to mini-certifications (or building-block courses) in information processing for clinicians and to courses in clinical and health finance issues for IT workers. Such modular course offerings could be put together in various ways, depending on the skills and background of students and trainees, to create efficient pathways to certification."

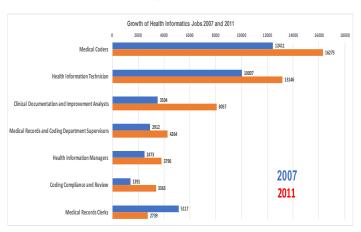

HISTORY OF DEMAND FOR HEALTH INFORMATICS KNOWLEDGE AND SKILLS IN AKRON MSA

_

⁴ Jobs for the Future & Burning Glass; A Growing Jobs Sector: Health Informatics, 2012, p 10.

In the Akron MSA labor market for healthcare workers during the same period, dramatic

increases occurred. By 2015, over 1,000 ads included references to health informatics. Education and training providers responded by creating Certificate or Associate degree programs specifically to provide technician-level workers to help build and access these new systems within employer organizations. BLS and Burning Glass responded by creating a new occupational title for these

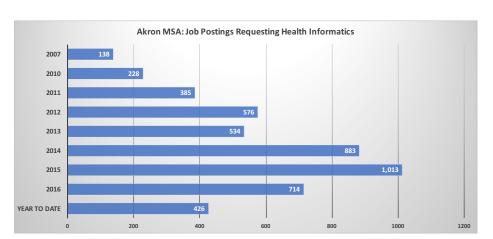

IT workers specifically to work in the healthcare environment.

Since then, job ads requesting these skills, and job ads for the new occupations have dropped dramatically. This is a nation, not just local change.

Locally, in the last 365 days:

 Only one in eleven postings for

healthcare professional/ technical or support workers include health informatics knowledge or skill sets as needed for the jobs posted.

• So far during 2017 demand for these skill sets up slightly over last year, but likely to still be below the high in 2015.

What is most striking in the Akron MSA about the occupations in which informatics is included is the wide range of occupations impacted. The occupations where job duties would include responsibility over patient information, its security and the new systems to maintain, protect and share patient information have the fewest job postings in the table. The only occupations specifically charged with these responsibilities, Clinical Data Systems Specialist, has only 18 posts in the last 365 days.

Top specialized skills listed in all ads that include health informatics as part of job responsibilities are: Medical Coding and Patient Care. This is further evidence that increasingly nurses and others delivering patient care need to understand and use new networks and data systems that track and share patient information.

In terms of IT skills, Microsoft applications top the list along with ICD-9 CM Coding (International Classification of Diseases, 9th Revision, Clinical Modification). The need to hire healthcare workers and the related need for healthcare organizations to hire large numbers in other occupations is among the largest in the region.

These skills are more toward what you would expect in job postings for support positions noted above.

According to a recent national survey:

"MGMA polled 1,037 medical group leaders and 47 percent said their organization offers a

mix of in-house and outsourced cybersecurity needs. Of the respondents, 31 percent noted that their organization manages cybersecurity needs in-house, and 21 percent noted that their organization outsources cybersecurity needs... one of the reasons many participants cited using a mix of in-house and outsourced resources is that their internal staff does not have the capability to do everything. For larger organizations, security is more likely to be managed entirely in-house. Many respondents whose organizations manage all cybersecurity needs in-house said they were part of a hospital system or other large organization."

Except for the Cleveland Clinic⁶, the need to educate current and future healthcare workers to handle the

LABOR MARKET INSIGHTS FOR HEALTHCARE WORKERS: AKRON MSA

responsibilities of sophisticated informatics does not appear to be having the impact on the internal workforce organization as originally thought. Only a discussion with healthcare leaders in the Akron MSA can add further insight into these findings.

While informatics skills appear in ads for new hires in healthcare, it is possible that healthcare employers are emphasizing upskilling of current workers. Whatever the case, this remains an important topic for discussion and clarification with the larger organizations in the Akron area.
